Thanks, Cadie, for sending this so quickly!

Thank you also for your work to arrange and prepare for yesterday's meeting. I know it was very helpful for Chris to have the chance to talk directly with the Mayor on these issues.

On the information below, if you can point us in the direction of any papers or policy docs related to those standards, that would be very helpful. We will also see what we can track down.

I will be back in touch on other next steps...

Lucy

Hi Lucy,

Here is the answer to the Europe question. They are interested in food in people. Which is squarely in EPA camp, but not in Clean Water Act.

Maybe an interesting de-siloing angle for the green chemistry subcommittee with EPA support of some sort?

Great meeting yesterday, thanks for arranging it. We'd love to do a tour upon Chris' return if possible!

Cadie

Subject: RE: Europe and PCBs

In foodstuffs they have a maximum level for the sum of PCB 28, 52, 101, 138, 153, and 180. They also have a value for the Toxic Equivalency which has factors for PCB 77, 81, 126, 169, 105, 114, 118, 123, 156, 157, 167, and 189.

From EU no 1259/2011

Which PCBs does Europe regulate?
